Increasing speed and quality without changing the application

The Microplex continuous forms laser printers, for example the **SOLID F40**, can also print complex and variable data that contains many barcodes, maintaining the maximum speed at 2,000 lpm contrary to most line matrix printers, where the printing speed is reduced to achieve a slightly better print quality. Therefore the SOLID F40 reduces the printing time significantly and keeps the high quality at **600 dpi**.

- Maximum speed with variable and complex data (i.e. 2D barcode)
- Reduced printing time compared to line printer
- High quality 600 dpi printing at maximum speed
- Cost effective

Fit-to-page - the easy way - Microplex cut sheet

For delivery notes that were printed on a line printer, take the data stream and send it to one of our cut sheet laser printers and this feature will print it on **letter, legal or even ledger**.

There is no need to touch the data and application software at all.

- Auto fit-to-page feature to replace common line printer formats
- Many line printer emulations like **IGP/VGL, Epson ESC/P, Ansi Genicom, CODE-V, MT-600, IBM Proprinter and IPDS**
- No need to touch the application software - **"Plug-and-print"**
- Best print quality and high speed even with complex data
